- 47 Q. Please state your name and business address.
- 48 A. My name is Michael Guffy, and my business address is Schwartz Ventures, Inc.,
- 49 5885 North State Route 159, Edwardsville, Illinois 62025.

50

- 51 Q. By whom are you employed and in what capacity?
- 52 A. I am a Senior Management Consultant for Schwartz Ventures, Inc., a consulting
- firm specializing in working with small telephone companies.

54

- 55 Q. Would you please outline your educational background and business experience.
- A. A graduate from Iowa State University in 1984, I was employed as a General
- Accounting Manager for CCS Telephone Company in Jackson, Michigan, a
- 58 17,000 access line independent telephone company from 1984 through 1987. I
- then began my consulting career with Interstate Telephone Consulting, Inc. As a
- 60 consultant for the past 17 years, I have become familiar with state regulatory
- 61 plans throughout the Midwest, including Wisconsin, Minnesota, Michigan, Iowa,
- Indiana and Illinois. My involvement in telecommunications has encompassed
- cost study preparation, meet point billing negotiations, intraLATA toll issues, and
- state and federal tariff submissions. Additionally, I continue to be involved in all
- aspects of the expanding telecommunications marketplace, including wireless, toll
- resale and cable television.

67

68

Q. On whose behalf are you providing testimony in this proceeding?

I am providing testimony on behalf of and in support of the Petition filed by

Shawnee Telephone Company ("Shawnee"). Our firm has provided consulting
services to Shawnee in connection with the subject matter of this proceeding and I
performed the incremental cost analysis regarding the costs to Shawnee of
providing wireline-to-wireless local number portability based upon information I
have received from the company and others, which I will subsequently be
introducing and discussing in my testimony.

For the record and to provide background, did an Order of the Federal

Q.

A.

A.

Communications Commission entered in November, 2003 lead to the filing of the Petition in this docket requesting a suspension or modification of the Section 251(b)(2) requirements related to the provision of wireline-to-wireless number portability pursuant to Section 251(f)(2) of the Federal Telecommunications Act? Yes, that is correct. The FCC on November 10, 2003 in response to a CTIA Petition For Declaratory Rulings On Wireline-Wireless Porting Issues released a Memorandum Opinion and Order and Further Notice of Proposed Rulemaking in CC Docket No. 95-116. As it pertains to the Top 100 MSAs in the country, the November 10, 2003 FCC Order concluded, in part, as follows at paragraph 22: "We conclude that, as of November 24, 2003, LECs must port numbers to wireless carriers where the requesting wireless carrier's "coverage area" overlaps the geographic location of the rate center in which the customer's wireline number is provisioned, provided that the porting-in carrier maintains the numbers original rate center designation following the port."

For companies whose service territories are not located within a Top 100 MSA, the date for a provision of wireline-to-wireless local number portability was established as the later of six months after receipt of a bona fide request or May 24, 2004. The FCC, in a subsequent Order, extended the November 24, 2003 date to the later of six months after receipt of a bona fide request or May 24, 2004 for rural telephone companies in the Top 100 MSAs, as well.

100 Q. Is Shawnee's service territory located within a Top 100 MSA?

101 A. No, it is not.

A.

103 Q. For the record, please provide a description of Shawnee and its operations.

Shawnee is a small telephone company and a facilities-based incumbent local exchange carrier providing local exchange telecommunications services as defined in Section 13-204 of The Illinois Public Utilities Act ("Act") subject to the jurisdiction of the Commission. Shawnee provides service in its Hicks, Leamington, Equality, Rosiclare, Elizabethtown, Cave-in-Rock, Eddyville, Simpson and Renshaw exchanges. As of December 31, 2003, Shawnee provided service to approximately 4,526 access lines. Shawnee's service area consists of approximately 508 square miles and is sparsely populated with just under nine access lines per square mile.

114	Q.	Is Shawnee a "rural telephone company" within the meaning of Section 153(47)
115		of the Federal Act and Section 51.5 of the Rules of the Federal Communications
116		Commission?
117	A.	While I am not an attorney, it is my understanding that Shawnee is a "rural
118		telephone company" within the meaning of the Federal Act and the FCC's Rules.
119		
120	Q.	As a rural telephone company, does Shawnee possess a "rural exemption" of the
121		251(c) obligations pursuant to Section 251(f)(1)(A) of the Federal Act?
122	A.	While once again I am not an attorney, it is my understanding that Shawnee
123		possesses a "rural exemption" pursuant to the terms of the Federal Act.
124		
125	Q.	Has Shawnee received a Section 251(c) bona fide request for interconnection,
126		services or network elements from any telecommunications carrier?
127	A.	No, it has not.
128		
129	Q.	Has any telecommunications carrier requested this Commission to terminate
130		Shawnee's rural exemption pursuant to the provisions of Section 251(f)(1)(B) of
131		the Federal Act?
132	A.	No, they have not.
133		
134	Q.	Has any wireline telecommunications carrier requested Shawnee to provide
135		number portability?
136	A.	No, they have not.

137		
138	Q.	Has Shawnee received correspondence or inquiries from wireless carriers, which
139		taken into consideration the content of the November 10, 2003 FCC Order, could
140		be interpreted to be requests for wireline-to-wireless local number portability?
141	A.	Yes, Shawnee has received those kinds of documents from Verizon Wireless. It
142		was an oversight on the part of Shawnee not to indicate that documents had been
143		received from Verizon Wireless in the Petition filed herein. Again, while I am not
144		an attorney, I want to note for the record that the FCC's November 10, 2003
145		Order did not amend its pre-existing rules related to number portability.
146		
147	Q.	Are you attaching to your testimony the correspondence and other documents that
148		Shawnee received from wireless carriers?
149	A.	Yes, I am. The correspondence and other documents that Shawnee received from
150		Verizon Wireless are appended to my testimony as Shawnee Attachment 2.
151		(Response to Staff Data Request 1.12)
152		
153		The above-referenced Staff Data Requests asks that Shawnee detail "all facts"
154		that suggest correspondence and other documents contained in Attachment 2
155		"could constitute" requests for wireline-to-wireless local number portability. The
156		facts are the correspondence and the attached documents that constitute Shawnee
157		Attachment 2, which on their face appear to be "requests for wireline-to-wireless
158		local number portability". (Further response to Staff Data Request 1.12)

161		and other documents contained in Attachment 2 as insufficient to constitute a
162		bona fide request for wireline-to-wireless local number portability?
163	A.	No. (Response to Staff Data Request 1.13)
164		
165	Q.	Why has Shawnee not filed such a challenge or challenges?
166	A.	Assuming that "challenge" means that Shawnee would make some filing with the
167		FCC seeking a ruling that the correspondence and other documents contained
168		within Attachment 2 do not constitute a bona fide request for wireline-to-wireless
169		local number portability, Shawnee has been advised by counsel that such a filing
170		would not be proper or prudent at this time. (Further Response to Staff Data
171		Request 1.13)
172		
173	Q.	Does Verizon Wireless have a point of interconnection in Shawnee's serving
174		territory or numbering resources from Shawnee at the time this testimony is being
175		filed?
176	A.	No, it does not.
177		
178	Q.	Does any wireless carrier have a point of interconnection within Shawnee's
179		serving territory or numbering resources from Shawnee at the time this testimony
180		is being filed?
181	A.	No.
182		

Has Shawnee filed with the FCC a formal challenge against the correspondence

160

Q.

- Q. As a practical matter, what is the consequence of a wireless carrier not having a point of interconnection or numbering resources within the serving territory or exchange from which a number is ported?
- 186 A. It is my understanding that as a practical matter it means that a call to such a

 187 ported number from another Shawnee customer would have to be routed to a

 188 location or a point of interconnection outside of Shawnee's serving territory

 189 where the wireless carrier does have a point of interconnection. The routing of a

 190 call to a location outside of Shawnee's local calling area would normally lead to

 191 such a call being rated as an interexchange call or toll call.

- Q. Is Shawnee requesting that this Commission make a determination in this docket as to whether the correspondence and documents received from Verizon Wireless, or any similar documents that may subsequently be received from other wireless carriers, constitute a bona fide or specific request for wireline-to-wireless number portability in accordance with the FCC's rules?
- A. No, we are not. Shawnee is requesting that in the final Order entered in this docket that the Commission grant Shawnee a suspension or modification of the wireline-to-wireless local number portability requirements of Section 251(b)(2) pursuant to Section 251(f)(2) of the Federal Act until November 24, 2006. In our opinion, the focus of the proceeding should be on that request for relief.

204	Q.	Are you familiar with the wireline-to-wireless local number portability suspension
205		dockets initiated earlier by the five Illinois small companies who have a presence
206		in the St. Louis MSA, which is a Top 100 MSA?
207	A.	Yes, I am. In fact, I presented Direct and Rebuttal Testimony on behalf of
208		Madison Telephone Company in Docket No. 03-0730 and am familiar with the

Yes, I am. In fact, I presented Direct and Rebuttal Testimony on behalf of Madison Telephone Company in Docket No. 03-0730 and am familiar with the testimony submitted by the Staff witnesses in that docket as well as similar testimony submitted in the other small company dockets. I will make reference to the testimony submitted by Staff witness Jeff Hoagg concerning policy issues and the Staff's ultimate recommendations in the Madison docket and the other dockets and to the testimony of Robert Koch commenting on and responding to the incremental cost analysis submitted by Madison in that docket subsequently in my testimony.

At the February 23, 2004 hearing in the Madison docket, I submitted supplemental oral testimony as did Staff witness Hoagg concerning Madison's and the Staff's final recommendations to the Commission with regard to the requested suspension. Both Mr. Hoagg and I were questioned by the Administrative Law Judge at the hearing, and I am familiar with the responses each of us gave, as well as the responses given in the other four company dockets by the companies' witnesses and Mr. Hoagg.

- Q. For the record, would you please indicate the four other docket numbers in which hearings have been completed with regard to requests for suspension of the wireline-to-wireless local number portability requirements.
- A. The Petition of Egyptian Telephone Cooperative Association was heard in Docket
 No. 03-0726. The Petition of Harrisonville Telephone Company was heard in
 Docket No. 03-0731. The Petition of Alhambra-Grantfork Telephone Company
 was heard in Docket No. 03-0732, and the Petition of Home Telephone Company
 was heard in Docket No. 03-0733.

A.

- Q. In addition to your involvement in the Madison docket and your familiarity with the other four previous dockets, have you also had discussions with representatives of other small companies who have more recently filed Petitions with the Commission requesting similar relief to what is being sought by Shawnee with regard to wireline-to-wireless number portability?
 - Yes, I have. In light of Shawnee's and all of the other small companies' lack of experience in providing local number portability and our limited resources, we have relied not only on the efforts of the five companies who had initially filed, but the experience of other companies and their consultants and advisors in pooling information and making certain that we are all correctly identifying the activities and costs involved in the provision of wireline-to-wireless local number portability. To the extent we have made estimates or assumptions concerning certain of the costs, we have, in part, used the information available from the other dockets, taking into account the Staff's response as well as Shawnee's

specific information in developing the appropriate estimates or assumptions. We have also relied upon information provided to us and other carriers who have previously or are now seeking suspensions and from vendors and Associations with expertise in the area and from the National Exchange Carriers Association (NECA).

A.

- Q. With regard to Shawnee's request for a suspension or modification of any obligation it may have to provide wireline-to-wireless number portability, please describe Shawnee's basic position.
 - It is Shawnee's position that a small company, such as Shawnee, should not be required to provide wireline-to-wireless local number portability within its serving area until such time as operational and administrative problems associated with its provision have been worked out on a more global basis by the larger incumbent local exchange carriers, such as SBC, and the large wireless carriers requesting number portability. As I previously indicated in my testimony, companies such as SBC have been providing some type of local number portability for a number of years. Those companies have already made the incremental investments to provide local number portability and have trained employees and have had ongoing business experience in the provision of at least some type of local number portability. Shawnee has not had the obligation to provide any type of number portability, and therefore, has not incurred the incremental costs nor does it have the background and experience in the provision of any type of local number portability. In Shawnee's view, from a policy and

industry perspective, this would appear to be similar to the situation when customers were initially allowed to presubscribe to interexchange carriers. Presubscription was initially implemented by the large carriers, such as the RBOCs; and the operational, administrative and other difficulties associated with presubscription were worked out over a period of time between those large incumbent local exchange carriers and the large interexchange carriers, such as AT&T, MCI and Sprint. In connection with determinations related to the Primary Toll Carrier Plan in Illinois, this Commission provided a different and subsequent timetable of presubscription for small companies, such as Shawnee, after experience had been gained from the larger companies.

Second, it is Shawnee's position that it should in no event be required to provide wireline-to-wireless local number portability until such time as regulatory decisions have been made and mechanisms put in place that will allow Shawnee to recover all of its costs, not just some of its costs, associated with the provision of wireline-to-wireless local number portability. The FCC's Orders to date, including the November, 2003 Order, fail to address how the cost of transporting calls to wireless points of interconnection outside of the incumbent local exchange carriers' serving area and associated transiting or tandem switching costs, will be recovered. While it is Shawnee's belief that those costs should not be borne by Shawnee or its customers, no regulatory decision by the FCC or this Commission has been made as to how those costs will be recovered and mechanisms put in place to allow for such recovery. By granting this extension,

the ICC will allow time for the FCC and the Federal Courts to clarify a number of these issues pending in the FCC's Further Notice and any court appeals for clarification on the current Orders.

Third, the evidence I will be submitting will demonstrate that the additional or marginal costs to Shawnee of providing wireline-to-wireless number portability are significant for a company of Shawnee's size and would be unduly economically burdensome upon the company and its end user customers. The evidence will show that although Shawnee does not believe all of the incremental costs of providing wireline-to-wireless local number portability should be borne by its customers, that lacking regulatory determinations that the costs may be recovered in some other manner, recovery of those costs from Shawnee's end user customers would have a significant adverse economic impact upon them. The granting of a suspension or modification is not only consistent with the statutory criteria of Section 251(f)(2)(A) but would also be consistent with the public interest, convenience and necessity.

Finally and related to the above, it is Shawnee's position that a small company, such as Shawnee, should not be required to provide wireline-to-wireless local number portability until there is a demonstrated desire or demand for that service from our customers. Staff witness Hoagg, in the dockets regarding Madison's request and the requests of the other four companies, submitted testimony that indicated there were extremely low "take rates" by both Verizon subscribers

(.02% in January, 2004) and by SBC customers throughout its Midwest Region of .017%. Shawnee sees no evidence that there is any significant demand for wireline-to-wireless number portability within its serving area. Up until this time, Shawnee has not received any requests from customers that want to port their wireline number to their wireless service. Shawnee would be willing to provide the service at such time as there is a demonstrated demand from our customers for the service together with a willingness by all of Shawnee's customers to pay for the service. However, it is Shawnee's position that Shawnee should not be required to provide the service until such a demand is demonstrated, since the adverse economic impact on Shawnee's customers to recover from them the incremental costs associated with the provision of the service would be even more contrary to the public interest if there was little or no demand for the service.

- Q. Identify and describe in detail Shawnee's efforts to determine its customers' demand for wireline-to-wireless local number portability.
- 332 A. Shawnee has determined from its service representatives that they have received
 333 no inquiries from customers asking about wireline-to-wireless number portability.
 334 Shawnee is a small company and has not undertaken any official inquiry or
 335 survey from its customers at this time. However, as a small company, Shawnee is
 336 very familiar with its customer base and sees no evidence that there is any reason
 337 to believe that there will be any significant demand for wireline-to-wireless
 338 number portability within its serving area. (Response to Staff Data Request 1.14)

Q. Please provide a general description of what Shawnee would be required to do and the types of costs that would be incurred by Shawnee to provide wireline-to-wireless number portability in its serving area.

Shawnee has a Siemens DCO host switch located in its Rosiclare exchange, with remote switches located in its Hicks, Leamington, Equality, Elizabethtown, Cave-in-Rock, Eddyville, Simpson and Renshaw exchanges. While Shawnee has the most current generic software in its Rosiclare host switch, the LNP software functionality has not been implemented and therefore Shawnee's switch will not accommodate number portability. Shawnee would have to purchase an additional software feature to allow for the provision of local number portability from Siemens. As I will discuss subsequently in connection with the costs involved, Shawnee would also need Siemens personnel to load and activate that capability. Siemens personnel would also need to make translations in the switch and perform testing and verification. Shawnee would want its local engineers involved in the testing and verification process.

A.

Shawnee would need to file an application with NPAC and sign agreements to access the NPAC Service Management System (SMS). Shawnee would need to decide whether to enter into an agreement with a vendor to provide local number portability Service Order Administration (SOA) services. There will be costs associated with accessing the SMS and costs associated with the SOA process. Since calls to ported numbers would need to have a LNP data base dip in connection with the provision of number portability, Shawnee would need to enter

into an agreement with an LNP database provider which would include the query charges. There would need to be additional coordination and testing, including testing with any wireless carrier desiring wireline-to-wireless local number portability. The various agreements that Shawnee would need to enter into would need to be dealt with and reviewed by legal counsel prior to the implementation of local number portability.

Query costs will be incurred on a going-forward basis when a Shawnee customer calls a number that has been ported. Administrative, order processing, customer service, regulatory and legal costs will be incurred by Shawnee in connection with any requirement to implement and provide wireline-to-wireless local number portability. In addition, appropriate training of technical personnel would need to occur as well as appropriate training of other Shawnee personnel.

Customer education efforts will have to be undertaken, not only in connection with any initial offering of wireline-to-wireless number portability, but on an ongoing basis, as well. There will be ongoing operational and technical costs involved in the provision of local number portability associated with potential technical trouble resolution.

In addition, there are the transport and transiting costs, which I will be discussing subsequently in my testimony. The above is a very general and broad description of the types of activities and costs that Shawnee would incur.

A.

387 Q. If Shawnee were to be required to implement wireline-to-wireless local number 388 portability, what is your understanding as to how a Shawnee landline customer 389 call to a Shawnee number that had been ported to a wireless carrier would be 390 delivered to the wireless carrier?

The FCC's Orders and Rules as they now stand do not require a wireless carrier to have a point of presence within Shawnee's area nor do they require the wireless carrier to establish direct trunks to Shawnee for the purpose of delivering calls. Since no wireless carrier has a point of interconnection or numbering resources in Shawnee's serving area, Shawnee believes, based upon the FCC's current requirements, that all calls from Shawnee wireline customers to a Shawnee customer, who had ported his/her number to a wireless carrier, would have to be transported to the tandem that the particular Shawnee exchange subtends for delivery to the wireless carrier. The Rosiclare host switch subtends the Verizon tandem in Carbondale, Illinois, and therefore, calls to numbers ported to wireless carriers from all of the Shawnee exchanges would have to be delivered to the Verizon tandem in Carbondale for delivery to the wireless carrier.

Based upon our understanding and based upon the information that small company representatives have obtained regarding Verizon, it is my belief that initially common transport facilities provided by both Shawnee and Verizon would be used to transport calls to the Verizon tandem and that tandem switching facilities provided by Verizon would need to be used to transit the call to a

particular wireless carrier. In the cost analysis I will be presenting, I have estimated the transport and transiting costs based upon the rate elements and rates that we understand Verizon would charge and Shawnee's access rates for transport for the calls that would need to be delivered to the Carbondale tandem.

O.

So the record is clear, is it your understanding that neither the FCC, nor this

Commission, has to date determined the responsibility for the payment of those
types of costs and any associated intercarrier compensation for the transport of
calls nor has a determination been made as to how those costs should be
recovered?

419 A. That is correct. It is my understanding that neither the FCC, nor this Commission,
420 has to date determined the responsibility for those costs or how they are to be
421 recovered.

Does Shawnee believe that the company, and ultimately its end user customers,

Q.

should be responsible for those transport, transiting and related costs?

A. No. We believe those costs should not be the responsibility of Shawnee and/or its end user customers. However, at this point in time and for the purpose of projecting the estimated costs involved in the provision of wireline-to-wireless local number portability, we have had no choice but to assume the worst case scenario in which Shawnee would be responsible for the costs of delivering those calls to the wireless carrier and ultimately recovering those costs from our end

user customers. As I stated earlier in my testimony, it is Shawnee's more basic

position that we should not be required to provide wireline-to-wireless number portability until such time as determinations have been made as to how the transport and transiting costs are to be recovered and mechanisms are in place that will allow Shawnee to recover these costs.

- Q. Has Shawnee attempted to estimate the costs that would be involved for Shawnee to provide wireline-to-wireless local number portability, and in turn, the potential amount that would have to be recovered from each of Shawnee's customers per month to recover those costs?
- A. Yes, we have. While certain of the costs are based upon information we have received from vendors, we have had to estimate a number of the incremental costs and make certain assumptions regarding the quantity of numbers that would be ported and the traffic to those numbers from other Shawnee customers. As a result, the analysis I am providing is what I would characterize as Shawnee's "best estimate" of the costs involved and the potential amount that would have to be recovered from Shawnee's customers.

- 449 Q. What model or methodology have you used in preparing the costs estimate?
- A. The FCC has had rules in place for some time regarding local number portability
 cost recovery for landline-to-landline number portability pursuant to which a
 federal end user surcharge could be tariffed and filed for that cost recovery.

 Those rules contain certain investment costs and certain ongoing expenses to be
 recovered via an end user surcharge to be in place for a five year period of time.

455 Present value calculations are involved in establishing the surcharge. We have used that type of methodology in order to estimate the costs over a five year 456 457 period of time and the amount of a potential customer surcharge. We have included all of the incremental costs that Shawnee believes would be incurred. 458 459 460 Q. Does the FCC's methodology address the recovery of the transport and transiting 461 costs you previously discussed? No, it does not. As I previously indicated, no determination has been made by the 462 A. 463 FCC, nor this Commission, concerning the recovery of those costs. However, for 464 the reasons I previously stated, we have estimated the amount of those costs over 465 a five year period of time and included them within the calculations, since under a 466 worst case scenario, they would have to be recovered from Shawnee's end users. 467 468 While we have used the FCC methodology, the purpose was not to establish the 469 amount that could be recovered under the FCC's Rules but rather the amount, 470 which in some fashion whether it be through surcharges or increases in basic 471 rates, would have to be recovered from Shawnee's end user customers. 472 Has Shawnee used a particular model in making its costs estimates? 473 Q. 474 Yes, we have. Our model is based on cost support filed and approved by the A. 475 National Exchange Carriers Association (NECA) in a local number portability

filing, which they made with the FCC in NECA's Transmittal #956. The NECA

model has been used by individual companies to file their federal surcharges, and as a result, we felt it was appropriate for use.

I would like to note that this is the same model that was used by Madison and the other four companies in the prior LNP suspension filings and reviewed by the Commission Staff.

- Q. So that the record is clear, is Shawnee requesting this Commission to approve the cost estimates it is submitting as its incremental costs of providing wireline-to-wireless local number portability?
- A. No, we are not. The estimates are being submitted to provide the Commission the best estimates we have of the incremental costs Shawnee would incur and the estimated amounts Shawnee would have to recover from its customers if Shawnee were required to provide wireline-to-wireless local number portability at this time. The information is also submitted in light of the statutory criteria contained in Section 251(f)(2) of the Federal Act pursuant to which Shawnee is seeking a further suspension or modification of the wireline-to-wireless local number portability requirements.

Q. For a similar reason, would you indicate for the record whether Shawnee is
 requesting that the Commission approve any type of end user surcharge, or
 increased customer rate, connected with the provision of wireline-to-wireless

local number portability or find that any such amount is appropriate to be recovered under the federal surcharge.

No, we are not. The information is being presented for the reasons I previously indicated, and most specifically, not to ask that the Commission approve some type of end user rate increase and/or surcharge or find that a surcharge amount is appropriate if tariffed at the federal level.

A.

A.

Q. For the record, please identify Attachment 1 to Shawnee Exhibit 1.

Attachment 1 is Shawnee's exhibit estimating the total costs to Shawnee of providing wireline-to-wireless local number portability. Attachment 1 is five (5) pages in length. The first page of the Attachment entitled "Shawnee Telephone Company Local Number Portability Data Summary" sets forth the total costs that Shawnee has projected as I previously described. As can be seen from looking at that page of the exhibit, there are initial local number portability start-up costs, both in the Investments and Expenses categories and then certain ongoing expenses over the five year period of time. After applying present value factors, the cost is \$555,902.

As shown at the bottom right-hand corner of that page of the Attachment,

Shawnee would have to recover \$3.02 per month from each access line either by

means of a surcharge or a rate increase to recover the costs as described. It is

Shawnee's position that the Commission should find that a further suspension or

modification of any obligation Shawnee may have to provide wireline-to-wireless

local number portability is necessary to avoid a significant adverse economic impact on Shawnee's customers or to avoid imposing a requirement that is unduly economically burdensome on Shawnee and that the granting of such further suspension is consistent with the public interest, convenience and necessity. The remaining pages of Attachment 1 contain schedules and information of a back-up or workpaper nature while those materials might not normally be submitted into the record or provided initially. In light of the time constraints of the proceeding, we have included those materials so they would be available to the Staff and the Administrative Law Judge at the earliest possible time. I am now going to ask you questions concerning each of the line items on page 1 of Attachment 1. What costs are connected with the line item "LNP Software" and how were those costs estimated? This is the loading or activation of the local number portability capability within Shawnee's Rosiclare host switch, which I previously referred to. The cost of \$46,938 is a quote from Siemens to Shawnee. This quote from Siemens includes the work they would perform in connection with translations and testing and verification, as well; but since it was a composite quote, I have included it within this cost category.

Q.

Q.

A.

What are the costs associated with the category "Switch Translations"?

There will be an additional charge to the switch cost calculated above of \$3,000. As I previously indicated, the cost to have Siemens personnel do the necessary translations and associated testing and verification is included in the total quote from Siemens, which I have included in the LNP software line item of Attachment 1. In addition, Shawnee will need personnel from its consulting engineering firm to be involved in the testing and verification process. Based upon conversations with Shawnee's consulting engineer, Charlie Watts, and the amount of testing and verification that would be involved, we believe that an additional cost of \$3,000 for the Rosiclare host office would be incurred.

Are the query and transport and transit expenses you have estimated and which

O.

A.

A.

are included on the first page of Attachment 1 related to or driven by demand?

Yes, they are. As a result, we have had to make an assumption or estimate of the number of customers who would potentially port to a wireless carrier and the volume and duration of the calls from other Shawnee customers to those ported numbers. As I indicated previously in my testimony, it is Shawnee's belief that there would be little, if any, demand for wireline-to-wireless number portability by our customers. I have discussed the potential demand with other companies and advisors and have taken into account the demand estimates I made for Madison and which were made by the other small companies in the dockets that were previously heard. I have decided in consultation with the Shawnee management that the estimates used by Madison and the other small companies in

the other dockets (which have already been reviewed by the Staff) are reasonable, and Shawnee is using the same estimates.

The estimate contained in the exhibit and which we are making for this proceeding is that 6% of Shawnee's access lines would port to a wireless carrier in the first year we implement wireline-to-wireless number portability and that 1% more would port in each of the second, third, fourth and fifth years so that by the end of the fifth year, 10% would have ported.

We then examined Shawnee's internal data concerning originating and terminating minutes of use for local calls made by Shawnee's customers and the average call duration for local calls. Using this data and with the assumption that all of the customers who ported to a wireless carrier were typical with regard to the volume and duration of calls they would receive and would be the same as our average customer, we projected the number of calls and minutes of use that would need to be queried, transported and transited to wireless carriers over the five year time horizon. This information was then used in estimating both the query expenses and the transport and transiting expenses.

- Q. Taking into account your previous response, how was the amount of the query expense over the five years determined?
- 587 A. Based upon discussions we have had, it is our current understanding that Shawnee would put triggers into its switch that would result in only calls to ported numbers

being required to be queried. The rate per query dip has been obtained from a vendor and the projected demand was developed as described above. Based upon our present understanding, the query expense is relatively minimal.

592

593

589

590

591

- Q. Please describe the estimates included for transport and transit.
- 594 Differing from the query expense, the transport and transit costs are more A. 595 significant. As I indicated earlier, we have used the rates and rate elements that 596 we understand Verizon would charge and Shawnee's access rates for the transport 597 and transiting of calls to Verizon's Carbondale tandem for delivery to wireless 598 carriers. Like the query costs, the transport and transit costs grow from year to 599 year based upon the estimates of how many customers will have ported their 600 numbers to wireless carriers in each of the first five years. The query and 601 transport and transiting costs, as well as many of the other expenses, would 602 continue on and could potentially grow beyond the five year time horizon 603 included within the exhibit.

604

605

- Q. Was the FCC concerned about transport recovery for small rural ILECs when it issued intermodal LNP in November?
- A. Yes, most definitely. First and foremost, it is the intention of the Company in

 filing for this extension to allow time for the FCC and the Federal Courts to

 clarify a number of these issues. Speculating on the outcome of the pending FCC

 FNPRM and court appeals for clarification on the current Order does not seem

 productive. Second, Shawnee is not asking the ICC to determine or answer the

problematic issues created by the FCC intermodal LNP Order. Finally, the FCC 613 cost recovery correctly allows for the recovery of any and all costs that are 614 directly related to LNP, as it should. 615 616 Q. If a higher number of customers port to wireless carriers than you have projected 617 in your estimates, what would be in the impact on the estimates you are 618 presenting? 619 If a higher number of customers port resulted in higher call volumes, we will have A. 620 underestimated both transport and transit costs, as well as the query costs. 621 Shawnee would also have fewer access lines over which to recover any costs, and 622 the costs per subscriber per month would be higher than that reflected on 623 Attachment 1. 624 If on the other hand Shawnee's belief is correct that there is little or no demand 625 Q. 626 for wireline-to-wireless number portability, what would be the impact? 627 If that is correct, we would have overestimated variable costs, such as transport A. 628 and transit and query charges. However, the initial start-up investments and 629 expenses would remain as well as certain ongoing expenses. In Shawnee's view, 630 until there is a proven demand, those expenses and investments should not be 631 incurred and they would, in fact, in some ways be even more unfair and 632 burdensome on Shawnee's customers to make them pay for the costs for a service 633 (although the costs would be lower), which they do not desire.

612

Q. Please comment on the expense line labeled "regulatory/legal/admin/order processing".

Based upon our discussions with counsel and the other small companies, we have estimated initial or start-up legal and regulatory costs in the amount of \$20,000. The estimate includes estimated fees from consultants and attorneys to negotiate service level agreements with wireless carriers, develop and file LNP tariffs, file company information with NeuStar and in the BIRRDS/LERG data bases, evaluate query and SOA providers, implement regulatory-compliant 911 methods and understand all regulatory requirements associated with intermodal LNP. The estimated regulatory/legal hours may be conservative considering that Shawnee does not have employees who are devoted to regulatory matters and that they outsource most regulatory work to consultants and attorneys. In subsequent years, the cost of processing a service order has been calculated to be \$40 per order based on the various work activities and personnel required to complete an LNP port request order. The demand figures previously discussed are then used in calculating the totals shown on the workpapers contained in Attachment 1. These costs were added to other general NPAC database costs related to LNP.

Α.

- Q. Please explain the "Employee Education" expense, which you have included on the Attachment.
- A. Siemens has indicated that technical training can be provided to technical personnel through the use of a video they have developed, which is a cost of

\$175. I have included that \$175 cost but have not allocated any employee time with regard to the technical training at this point. In addition, non-technical employees would need to be trained. Shawnee has estimated that the training would cost \$300 per employee for 34 employees initially. There would be ongoing employee training over the years, and we have estimated that training to cost \$900 per year.

- Q. Please discuss the line item entitled "Technical Trouble", which I understand includes technical support to implement the local number portability process and would involve ongoing operational or technical issues related to the provision of local number portability.
- A. This is an estimate based upon Shawnee's experience with similar issues and services and our discussion with other small company representatives concerning these types of costs. We have projected total technician time and estimated labor rates over the entire five year period and then spread the cost, in part, between start-up costs with the remaining amounts being incurred over each of the five years.

- 676 Q. Please provide the basis for the estimated costs related to "customer education".
- A. If Shawnee were required to implement wireline-to-wireless number portability, it is the view of Shawnee's management that there would need to be at least two customer education mailing pieces prior to its implementation and that Shawnee would then need to have two ongoing mailings for customer education purposes

each year. Based upon the costs of previous pre-prepared mail pieces and our discussions with other companies, Shawnee is estimating that the costs of a mailing to each customer is 75¢ per mailing, which once again would occur twice each year. In looking at page 1 of Attachment 1, you can see that costs decline per year because of our assumption that we would have fewer access lines as time goes by as a result of certain customers porting their numbers to wireless carriers, as previously discussed.

- Q. Describe in detail the type of customer education Shawnee proposes to undertake.
- A. Since Shawnee is seeking a suspension of any obligation it may have to provide wireline-to-wireless local number portability, specific customer information pieces have not, as yet, been developed. However, as indicated in my prior answer, the Company intends to send out customer education mailing pieces prior to any time it is required to implement wireline-to-wireless local number portability and to continue the education process with follow-up mailings that the Company believes to be necessary. (Response to Staff Data Request 1.19)

- Q. Describe the purpose and content of the customer education that Shawnee intendsto provide.
- A. Once again, since the Company is seeking a suspension of any obligation it may
 have to provide wireline-to-wireless local number portability, the specific content
 of any customer education pieces have not been developed at this time. The
 Company would tend to get informational pieces perhaps developed by larger

companies and provided to their customers for use in developing appropriate mailing pieces. The purpose of the customer education would be first and foremost to provide information concerning what wireline-to-wireless number portability is and to provide information to the customer concerning what steps they would need to take if they desired to port their landline number to a wireless telephone. Once again, Shawnee, as a small company, intends to rely upon information developed by larger companies, trade associations, etc. in developing appropriate customer education pieces should they become necessary. (Further Response to Staff Data Request 1.19)

- Q. Am I correct that present value calculations were performed as reflected on page 1 of Attachment 1?
- 716 A. Yes, that is correct.

- 718 Q. Does that complete your discussion of Attachment 1 and Shawnee's estimates of 719 the incremental costs involved to it and the potential amounts that would need to 720 be recovered from Shawnee's customers if required to implement wireline-to-721 wireless number portability?
- Yes, it does. I should emphasize that the cost estimates are based upon what is
 known today and take into account the estimates and assumptions we have made.

 Other companies may be able to include additional estimated costs, which I have
 not included within the Shawnee exhibit, and to that extent, the estimated costs
 contained in Attachment 1 may well be low.

7	7	7
1	L	1

- 728 Q. In regard to the relief that Shawnee is seeking in this proceeding, is Shawnee
 729 asking the Commission to enter an Order in this docket permanently suspending
 730 any obligation that Shawnee may have to provide wireline-to-wireless local
 731 number portability?
- 732 A. No, Shawnee is not.

733

- 734 Q. Please describe the relief that Shawnee is requesting.
- 735 Shawnee is requesting a suspension of any obligation it may have to provide A. 736 wireline-to-wireless local number portability for a period of 2½ years or 30 months from May 24, 2004 to November 24, 2006. That is the length of 737 738 suspension that both individual small companies and the Staff have recommended 739 in the five proceedings that were previously heard and which I have referenced in my testimony. After discussions with Shawnee's management and its advisors, 740 741 Shawnee believes that the recommendations made by both the companies and the 742 Staff in those proceedings are not only reasonable but are reflective of Shawnee's 743 situation, as well.

744

- 745 Q. Does that conclude your direct testimony?
- 746 A. Yes, it does.

Verizon Wireless 2785 Mitchell Drive MS 7-1 Walnut Creek, CA 94598

November 18, 2003

IMMEDIATE ATTENTION REQUESTED Shawnee Telephone Co. 120 W. Lane St. Equality, IL 62934

Re: Local Number Portability

Dear James Coyle:

The FCC has recently reiterated the pre-existing deadlines for local number porting for wireless and wireline carriers operating outside the Top 100 MSAs, effective May 24, 2004. Verizon Wireless Cellco Partnership d/b/a Verizon Wireless would like to begin to complete a Service Level Agreement (SLA) to ensure a smooth transition to number portability by establishing procedures to govern the exchange of information during the porting process. Specifically, an SLA would serve several purposes: memorialize the intercarrier communications processes that the two carriers intend to follow, capture appropriate porting center and trouble contacts, and contain the parties' agreement to successfully facilitate porting customers. If you have not already received a copy of our SLA, you can obtain one by contacting Sharon Cañas at 925-279-6122 or email Sharon.Canas@VerizonWireless.com.

If negotiating an SLA is not possible in the next few weeks before the LNP deadline, Verizon Wireless's immediate concern is in obtaining, at minimum, a Trading Partner Profile (TPP). The TPP would provide basic factual information necessary to accomplish portability and would include those entities covered by the profile and any back-office or porting center contacts. Verizon Wireless plans to integrate this information into its information systems and also provide it to personnel staffing our porting center. Whether or not an SLA is ultimately executed, sharing this type of factual information is necessary to facilitate porting as well as fallout resolution. In this regard, we have enclosed a copy of the TPP with appropriate contact information.

Please include a response to this request along with a point of contact for provision of TPP information and/or SLA discussions in a letter or email addressed to the undersigned. Thank you for your immediate attention and cooperation.
